Type: ROUTINE INSPECTION

Date: Jan-18-2011

HARTVILLE, MO 65667

2.40 (b) (2) REPEAT DIRECT NCI

ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE (DEALERS AND EXHIBITORS).

(b) Each dealer or exhibitor shall establish and maintain programs of adequate veterinary care that include:

(1) The availability of appropriate facilities, personnel, equipment, and services to comply with the provisions of this subchapter;

(2) The use of appropriate methods to prevent, control, diagnose, and treat diseases and injuries, and the availability of emergency, weekend, and holiday care;

****At the time of the inspection there were two Boston terrier x Beagle mix dead pups, in an enclosure. The dogs were white with brindle markings. The dead pups were contained with four other litter-mates. The two pups appeared to have bloody stool and the odor associated with a bloody stool present. The owners stated that the pups were fine the morning of 01-18-2011. Another of the litter in the outdoor portion of the enclosure appeared depressed and bent over. The pup must be taken to the attending veterinarian for evaluation and treatment if necessary. A record of the evaluation and treatment protocol must be maintained by the licensee.

3.1 (a)

HOUSING FACILITIES, GENERAL.

(a) Structure; construction. Housing facilities for dogs and cats must be designed and constructed so that they are structurally sound. They must be kept in good repair, and they must protect the animals from injury, contain the animals securely, and restrict other animals from entering.

***At the time of the inspection, the wire used on the inside of the enclosure had holes that allowed the pups to fit their heads through the opening. The wire material must have small enough holes to prevent the dogs from sticking their heads through the openings. The pups could be injured by another dog or by getting their heads stuck in the openings. To protect the dogs from injury and to contain the animals securely the material must be repaired, replaced or modified so that the animals are prevented from putting their heads through the wire material. To be corrected by 01-25-2011.

Type: ROUTINE INSPECTION

Date: Mar-01-2010

HARTVILLE, MO 65667

On 03-01-2010 a focused inspection was conducted on a Boston Terrier female micro chip # 037887101. Previously, on 02-24-2010 during a routine inspection, the animal was observed with a red mass protruding from the anus. The owner was advised by the inspector, that the animal must be evaluated by a veterinarian and a record of the evaluation and treatment protocol maintained.

During this focused inspection, the dog was observed and it appeared to be normal. Owners provided conformation that the animal was taken to their veterinarian for evaluation and received treatment for a prolapse rectum.

**Inspection and exit interview conducted by R. Whiteley, ACI and the owner.

Date: Feb-24-2010

HARTVILLE, MO 65667

2.40 (b) (2)

ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE (DEALERS AND EXHIBITORS).

(b) Each dealer or exhibitor shall establish and maintain programs of adequate veterinary care that include:

(2) The use of appropriate methods to prevent, control, diagnose, and treat diseases and injuries, and the availability of emergency, weekend, and holiday care;

At the time of the inspection, a Boston terrier female microchip #037887101 had a red mass hanging from the vaginal / anus area. The owner explained the dog was recently purchased and just came in heat. Owner stated that the animal was scheduled for a veterinarian evaluation on 02-25-2010. Documentation must be maintained for any health related problems that includes the following information:

- Identity of the animal.
- Descriptions of the illness or injury
- Dates, details, and results of examinations, tests, and other such procedures.
- Dates and other details of all treatments, including the name, dose, route, frequency, and duration of treatment with drugs or other medications

3.11 (c)

CLEANING, SANITIZATION, HOUSEKEEPING, AND PEST CONTROL.

(c) Housekeeping for premises. Premises where housing facilities are located, including buildings and surrounding grounds, must be kept clean and in good repair to protect the animals from injury, to facilitate the husbandry practices required in this subpart, and to reduce or eliminate breeding and living areas for rodents and other pests and vermin. Premises must be kept free of accumulations of trash, junk, waste products, and discarded matter. Weeds, grasses, and bushes must be controlled so as to facilitate cleaning of the premises and pest control, and to protect the health and well-being of the animals.

Inspection Report

****At the time of the inspection, the surrounding grounds around the kennel buildings had an accumulation of construction material and other debris. A ten foot area around each of the kennel buildings must be established to eliminate breeding and living area for rodents and other pests and vermin. Some method of organization must be implemented and maintained to all the accumulated, assorted piles of building material, lawnmowers, car parts ect. The debris and other things must be removed and placed in an area away from the dogs. The surrounding grounds of the kennel should be routinely maintained so that the weeds and other grasses can easily be clipped and maintained. Providing an area free of rodents, vermin and others pests is beneficial for all the animals health and well-being. Creating areas for the dogs to be housed that are easily cleaned and maintained allows more time for socialization, grooming, and maintenance of the dogs. The ten foot area around the kennel buildings, the outdoor runs and the surrounding grounds must be organized and maintained by 03-20-2010.

3.11 (d)

CLEANING, SANITIZATION, HOUSEKEEPING, AND PEST CONTROL.

(d) Pest control. An effective program for the control of insects, external parasites affecting dogs and cats, and birds and mammals that are pests, must be established and maintained so as to promote the health and well-being of the animals and reduce contamination by pests in animal areas.

****The area between the outdoor runs had puddles of accumulated water. The areas should be filled with something to prevent standing water. The standing water can provide area for pests and other vermin. The areas created for the dogs should be easily cleaned and maintained. Provide some kind of fill to prevent the standing water and make the area easily trimmed and maintained during summer months. Owner stated that they would have a load of gravel delivered in the next thirty days.

****Inspection and exit interview conducted by R. Whiteley, ACI and the owners.

Type: ROUTINE INSPECTION
Date: Jan-20-2009

HARTVILLE, MO 65667

3.11 (a)

CLEANING, SANITIZATION, HOUSEKEEPING, AND PEST CONTROL.

Sec. 3.11 Cleaning, sanitization, housekeeping, and pest control.

(a) Cleaning of primary enclosures. Excreta and food waste must be removed from primary enclosures daily, and from under primary enclosures as often as necessary to prevent an excessive accumulation of feces and food waste, to prevent soiling of the dogs or cats contained in the primary enclosures, and to reduce disease hazards, insects, pests and odors.

*****At the time of the inspection, several of the enclosures had accumulations of waste food and fecal matter in them. There appeared to be more than one day of waste material in the runs. The enclosures must be maintained so that the animals are not walking in waste matter. Daily removal of the waste material and old bedding will help to prevent spread of disease and vermin in the kennel area. To protect the health and well-being of all the animals daily cleaning of the enclosures is essential. This affects twenty animals. Corrected during inspection.

*****Inspection conducted by R. Whiteley, ACI and the owner.

This is a transcribed copy of the original inspection report.
